

When "Lightning Strikes" . . . Make sure it's your gun behind the score!

Cowboy shooters know that when seconds count you look for speed and accuracy in every shot. The Cowboy Action Lightning Rifle™ is built for this purpose.

This unique benefit of the Lightning rifle is the ability of the shooter to never lose that critical "anchor arm" (regardless of whether you are right or left handed) and remain focused and ready on

The most striking feature about the Lightning is the slide or pump mechanism. Many rifles of the Old West were lever action. This means the "Anchor Arm" breaks its hold in order to function the lever to work the action. The result is that the 'anchor arm' causes the shooter to lose the critical barrel/target relationship.

your target. When "Second place is not an option". . . put your score on the board with the Lightning. For more information, see your dealer, call us at 1-860-296-7441, or visit our website www.usfirearms.com
